

SIDE Industrie Expands the Development of the DIP Systeme's Range

The DIP Systeme® has been in existence for over 16 years and represents over 2000 installations all over the world. This year again, on the top of the launch of the innovative DIP Booster (the gravity line accelerator and flood protection system), **SIDE Industrie** is expanding the development of the DIP Systeme's range with the launch of the new DIP28! This new auto-adaptive model is even more compact, while still offering, as standard, the self-cleaning, patented, DIPCut® impeller. Building on over 16 years of successful experience and with our customers feedback, this new DIP System offers all the technological advances and benefits of the new generation of DIP System: immersible IP67 with high efficiency motors; controlled by smart frequency converter; an integrated level sensor protection against rocks and sand; the "Rags killer" DIPCut® impeller; 2 suction valves for a simplified maintenance without any disruption in service; the OmniDIP IoT is as well available in option. The DIP28 fits any sanitation network configuration, without the need for straight inlet section. Its compact design (Inlet/Outlet on the
